

WEEKLY FLU REPORT

Epidemiology Program—Influenza-Like Illness (ILI) Surveillance

2017 CDC Week 42

This Report Includes...

- ⇒ information on influenza-like illness (ILI) activity in Harris County as well as on the state and national level.

Important Notes:

- ⇒ Influenza-like illness (ILI) is defined as an illness including a fever (temperature of at least 100°F) with a cough OR a sore throat, without another known cause (such as strep throat).
- ⇒ Influenza/ILI is reported on a voluntary basis and is not a mandatory notifiable condition.
- ⇒ Similarly, rapid influenza test results are also reported on a voluntary basis.
- ⇒ Therefore, data presented in this report indicate trends and should not be interpreted as a complete and total picture of influenza activity in Harris County.
- ⇒ The 2017-2018 influenza season is from October 1, 2017—May 19, 2018.

Public Health is “what we as a society do collectively to assure the conditions in which people can be healthy”

- The Future of the Public's Health in the 21st Century, Institutes of Medicine, 2003

ILI Activity Level

*This map uses the proportion of outpatient visits to healthcare providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.
 *Data collected in ILINet may disproportionately represent certain populations within a state, and therefore may not accurately depict the full picture of influenza activity for the whole state.
 *Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map are based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data is received.
 *Differences in the data presented by CDC and state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.

A Weekly Influenza Surveillance Report Prepared by the Influenza Division

Weekly Influenza Activity Estimates Reported by State and Territorial Epidemiologists*

Week Ending Oct 14, 2017 - Week 41

*This map indicates geographic spread and does not measure the severity of influenza activity.

Nationally

During week 41 (08 October to 14 October, 2017), activity levels from outpatient clinics are minimal (ILI below, or only slightly above the average) nationwide. In Texas, influenza activity was sporadic.

<https://www.cdc.gov/flu/weekly/>

Statewide

No variant influenza viruses have been identified in Texas during this flu season.

HCPH Jurisdiction

There were no influenza associated pediatric deaths reported in Harris County (excluding the City of Houston) during this flu season.

Statewide Influenza Activity Map

Figure 5: Texas Map Displaying the Highest Level of Influenza or ILI Activity Reported by County for the Week Ending Oct. 07, 2017 (MMWR Week 40)

Please note: The majority of influenza cases are not reportable by law in Texas. This map contains data from sentinel sites and only displays influenza and ILI cases that were reported to public health. Positive laboratory results are reported according to specimen collection date, or date received in the laboratory if the former is unknown.

School Reporting

Influenza/ILI reporting is voluntary as it is not a mandatory notifiable condition. Therefore, this report indicates trends and should not be interpreted as a complete and total picture of influenza activity in Harris County.

Daily absenteeism and student/staff ILI numbers are reported from schools in the 18 Harris County Independent School Districts (ISDs). Schools were asked to begin reporting ILI from the beginning of the school year; however, reporting participation generally increases as occurrence of ILI increases.

School holidays:

- * Week 47/48 (Thanksgiving)
- * Week 52-Week 1 (Winter Break)
- * Week 10/11 (Spring Break)

Student Absenteeism in HCPH's School Districts Due to Influenza-Like Illness (ILI) by CDC Week
2017-2018 Influenza Season vs. Previous Seasons

Staff Absenteeism in HCPH's School Districts Due to Influenza-Like Illness (ILI) by CDC Week
2017-2018 Influenza Season vs. Previous Seasons

School Absenteeism in HCPH's School Districts Due to Influenza-Like Illness (ILI) by CDC Week
2017-2018 Influenza Season

*There was a week 53 in the 2014-2015 influenza season, but there is not a week 53 for the 2017-2018 influenza season or the other previous seasons; therefore the week 53 data point for those seasons is an average of week 52 and 1.

Number and Percentage of Tests (Antigen, Culture, PCR) Positive for Influenza by Type, Subtype, and Lineage Reported by Texas Public Health Laboratories, 2017-2018 Season
